

Installation Guide: AutoReach AI

AutoReach AI Team

March 15, 2026

1 Introduction

This document provides a concise installation guide for the AutoReach AI project. For more comprehensive details, please refer to our full Installation Guide documentation.

2 Prerequisites

- Node.js (v20+)
- Python (v3.10+)
- Docker (optional, for containerized execution)

3 Local Setup Quickstart

3.1 Environment Setup

First, clone the repository and configure your environment variables:

```
cp .env.example .env
# Edit .env with your required CAMPAIGNX_API_KEY and
# GEMINI_API_KEY
```

3.2 Windows Run

For Windows users, use the provided PowerShell script:

```
.\run.ps1
```

3.3 macOS/Linux Run

For macOS and Linux, utilize the bash script:

```
./run.sh
```

3.4 Manual Setup

If you prefer to start services manually:

```
# Install Backend Dependencies
python -m pip install -r backend/requirements.txt

# Install Frontend Dependencies and Start
cd frontend
npm install
npm run dev
```

4 Docker Setup

To run the setup using Docker:

```
docker build -t autoreach-ai .
docker run --env-file .env -p 3000:3000 autoreach-ai
```
